

Stephani is currently enrolled in the Bachelor of Community Design & Sustainability program at Dalhousie University. Her areas of interest are environmental design (esp. stream restoration as a biophilic urbanism tactic), sustainable urbanism, landscape ecology, affordable housing and transportation planning.

Stephani's commitment to the planning school as a whole, is displayed by having been a TA for three planning classes and providing extra help sessions and mentorship to students outside of class time. She was the president of the Society of Undergraduate Planners. During this time, Stephani provided a sounding board to students, giving everyone the opportunity to amplify their voice to faculty and to provide a sense of community among all planning students. She also had the opportunity to oversee outreach for events, study sessions, etc.

Stephani's commitment to society is evident in her role as the co-founder of a startup non-profit 'Carbon Labels Canada', which advocates to have carbon footprint labels put on mass-market, consumer products. The purpose is to offer transparency at the point of purchase for consumers, considering the entire life cycle assessment of a product, from production to distribution. Stephani currently has 10 student interns working alongside her conducting market research.
